

Industrial Sectional Door SPU F42

World's first: with wicket door with trip-free threshold and construction with thermal break

Wicket doors with trip-free threshold

As a fully-fledged escape route

Trip-free passage

Wicket doors with trip-free thresholds pose less of a risk for persons stumbling and injuring themselves. Tool cars or trolleys can easily pass over the very flat stainless steel threshold with rounded edges.

The wicket door with trip-free threshold has many benefits:

- The sectional door does not need to be opened for pedestrian traffic.
- It reduces the risk of tripping up and makes it easier to wheel things through.
- Power-driven doors feature a leading photocell VL 2 with two sensors which causes the door to reverse on encountering an obstruction well before contact is made.
- The wicket door contact ensures that the main door can only be opened when the wicket door is closed.

905 / 940 mm clear passage width as standard

Under certain circumstances, the wicket door with trip-free threshold, with its clear passage width of 905 mm (depth 67 mm) or 940 mm (depth 42 mm), fulfils the requirements of an escape door and for barrier-free construction.

As an escape door

Up to a door width of 5500 mm, Hörmann sectional doors with a wicket door with trip-free threshold fulfil the requirements of an escape door under certain circumstances.

As an unobstructed entrance

Under certain conditions, Hörmann sectional doors with a wicket door with trip-free threshold fulfil the requirements for accessibility in accordance with DIN EN 18040-1 and are certified by the IFT Rosenheim.

Freely selectable position

The wicket door can be positioned both to the left, right and centre (except in the two outermost fields). The window sections above the wicket door have a clear view of 1025 mm as standard. All the door's additional fields have the same width.
